KidSight vision Screening

KidSight will be visiting our school to provide vision screenings for students. These screenings are fast, easy, and non-invasive—similar to having a picture taken.

Every family will receive a report of their child's screening results. If a potential vision issue is found, KidSight and the school nurse's office will work together to help families to local, affordable vision care.

Please contact your school or teacher if you **DO NOT** want to participate in the screening.

KidSight is coming to your child's school!

Healthy vision is key for a child's learning and development.

One in four children has a vision problem.

Your child might not complain about blurry vision because it is "normal" to them.
